

We help de-risk and deliver your renewable projects

PSC and Primo Marine bring together their deep and complementary expertise in power systems and subsea cable engineering and consulting to help clients develop and deliver successful renewable projects around the world.

1 + 1 = 3!

By combining our resources, PSC and Primo Marine offer increased value to our clients. Our joint consulting and engineering expertise and experience support the safe, efficient and sustainable execution of your operation or project.

Together, we provide consulting, engineering and design services to clients engaged in developing and operating renewable projects, specifically offshore wind projects and subsea interconnectors.

PSC with its global resources and experience in offshore wind, power system studies and HVDC technology, is well-positioned to support the continued global growth in the development of offshore wind and other renewable projects in the UK and around the world.

Primo Marine brings its in-depth knowledge and subject matter experience of subsea power cables, offshore wind, offshore floating wind, and new technologies such as CO₂, hydrogen and offshore solar.

Our clients come first

- Both PSC and Primo Marine have built our respective businesses on client advocacy. At the same time, we recognise that to be truly customer-focussed, we can't tie ourselves to one or a few vendors or partners.
- Both PSC and Primo Marine have chosen to work together because, in some cases, our combined expertise and experience greatly benefit our clients.
- Our partnership is not mutually exclusive. In fact, the opposite is true. We both work with various players to offer a wide range of products and services, all aimed at bringing the best solutions to our clients.
- We pride ourselves on our objectivity. Remaining agnostic is fundamental to our businesses, and we do not compromise this value. We recognise that every project is different – that one size does not fit all. Our goal is to work with whoever brings the best solution for your particular project.
- We believe that flexible partnering allows us to bring bespoke advice and a simplified process to our clients. To provide objective guidance means that we are knowledgeable in all popular platforms so we can objectively recommend the best products and services for your requirements.

Our capabilities

PSC and Primo Marine offer complimentary strategic support to players in the renewable power sector. Our capabilities span technical, commercial and contractual matters, including but not limited to:

- Subsea cable engineering
- Technical due diligence
- Permitting and consenting
- Tender/contract management
- Landfall and shallow water studies
- Installation engineering, studies and procedures
- High voltage technology, testing and termination
- Project management
- Safety, quality and assurance
- Offshore representation and marine warranty
- Construction engineering
- Operations and maintenance
- Greenification and new technologies
- Survey/UXO management and engineering
- Route design and engineering
- Feasibility and interconnection studies
- Network and station planning
- Burial and protections studies
- Repair support and 24/7 emergency response

About PSC

At PSC, we're helping power a more sustainable world. Our global team of electricity experts has been tackling the thorniest problems for some of the most prominent industry players for over 25 years. By empowering people to make a difference and do the right thing, we help our clients and employees innovate and thrive in a rapidly changing industry.

Our global team of consultants, professionals and engineers leverage lessons learned from our projects around the world to provide our clients with expert, independent advice. We've been doing this since 1995 and we're just as passionate today as we were when we started. Always putting our clients' needs first, we've helped evaluate and implement new and emerging technologies for real-time operations, DER management, transmission renewables integration, network testing and analytics, and grid security compliance to help our clients develop their grid of the future.

About Primo Marine

Primo Marine are independent consulting engineers for the oceans' sustainable energy connections. Since more than two decades we advise our clients on major subsea power cable projects, contributing to the greenification of the world's energy supplies.

We offer a unique combination of academic knowledge and a long history of field experience to provide smart solutions. As trustful advisors we provide confidence from the boardroom to the back deck level in new or existing subsea infrastructure projects, ensuring your interests are protected by balancing cost, risks and technology over the lifetime of the assets.

We passionately guide our clients on technical, contractual and commercial matters related to interconnectors, export systems, offshore wind farms, new technologies like hydrogen, CO2 pipelines, floating wind, offshore solar and other smart developments beyond the horizon.
